

Authorize 90 days to make the next treasury decision

Direction and evidence mobilization only – no production, funding, or value approval

DIRECTION

87 federated

Against 72 local and 60 global. A design direction, not confidence, value, or readiness.

RECOGNIZED VALUE

\$0 today

RISK NOT QUANTIFIED

Cash, P&L, and capacity each recognize nothing. ROI, NPV, and payback remain unavailable.

RETURN POINT

90 days

A separate stop / extend / bounded-pilot decision at G3. Time does not override an open gate.

DECISIONS REQUESTED TODAY

- 1 Authorize federated coordination as the direction, with local stabilization as the documented fallback.
- 2 Confirm accountable owners for data, mobility, payments, controls, service, cost, and benefits.
- 3 Approve the 90-day evidence timebox and reserve every launch, spend, value, and scale decision.

GOVERNING MESSAGE ACG has enough evidence to choose a direction—not enough to authorize execution or book value.

Enough evidence to choose a direction—not to approve value or production

SUPPLIED-DATA READOUT

MEASURE	SUPPLIED RESULT	WHAT IT IS NOT
Same-day calendar proxy	58.18% of 9,955 account-days	Not intraday completeness or an SLA result
Payment exception rate	6.30% of 7,600 records	Not a certified enterprise population or a cause
Weighted option score	87 federated / 72 local / 60 global	Not value, confidence, cost, or readiness
Recognized cash, P&L, capacity	\$0 today	Not a claim that no opportunity exists

BOUNDARY

Model-control passes and supplied-data calculations are not execution evidence.

Four linked failures explain ACG's treasury problem

The recommendation must fix ownership, evidence, control, and service together

FAILURE MAP

FAILURE	SUPPLIED EVIDENCE	MANAGEMENT IMPLICATION
Visibility	58.18% same-day; 2,534 account-days beyond one day	Own the source, cutoff, reconciliation, and exception path
Liquidity	\$21m / \$35m / \$46.2m screens	Certify mobility, buffers, and economics before any action
Payment operations	31.51% manual touch; 6.30% exceptions	Prove causes before standardizing or automating
Operating model	Local practice; three ERPs; no enterprise TMS	A federated policy, data, and control spine with local rights

READ TOGETHER

These are one connected ownership, evidence, control, and service gap—not four separate projects.

Source: W2 diagnostic report; W3 future-state operating model.

Manual sources explain every delayed account-day in the supplied pattern

REPORTING METHOD EXPOSURE

METHOD	ACCOUNTS	SAME-DAY	SUPPLIED PATTERN
API	12	100%	No delayed account-day in the extract
Host-to-host	20	100%	No delayed account-day in the extract
Portal	9	0%	All observations one day late
Spreadsheet	14	0%	All observations two or more days late

METHOD LIMIT

A reporting-date proxy. It is not proof of intraday completeness, and it does not establish cause.

Source: W2 visibility outputs; dashboard reporting-method facts.

The liquidity analysis defines a certification agenda—not a cash-release claim

\$21M SCREEN

168 of 168 windows

Every complete 14-day window clears the stress threshold.

\$35M SCREEN

138 of 168 windows

The base threshold thins materially at fourteen days.

\$46.2M SCREEN

0 of 168 windows

NOT ACHIEVABLE

No complete window clears the upper case.

Recognized movable cash remains \$0 until VG01–VG05 close: authoritative balance and timestamp, legal and tax transferability, approved operating buffers, transfer economics, and a Finance-approved recognition rule.

BOUNDARY

A screening sensitivity on supplied balances—not surplus cash, transferable cash, or transfer authority.

Payment friction is material enough to diagnose—too weakly evidenced to automate

SUPPLIED EXTRACT RATES

MEASURE	SUPPLIED RATE	REQUIRED BEFORE ANY CHANGE
Manual touch	31.51%	Classify required control work before calling it avoidable
Exceptions	6.30%	Reason codes and source documents for the 120-record frame
Late release	5.00%	Approved cutoffs and event timestamps, not a supplied flag
Cross-border	10.34%	Corridor, beneficiary, and settlement evidence

BOUNDARY

These are associations. The 120-record source-linked sample must establish causes and controls first.

Six measures tell management whether this is working

Two performance signals, one value gate, two safety gates, one readiness gate

MANAGEMENT KPI SET

KPI	BASELINE TODAY	DECISION THRESHOLD	OWNER
Same-day cash visibility	58.18%	≥90% in approved cohort at G4	Group Treasurer
Payment exception rate	6.30%	≥20% like-for-like reduction by G5	Shared Services
Certified movable cash	\$0 recognized	Target only after VG01–VG05	Treasurer / Finance
Rollback within four hours	Not tested	Pass before G3 and each scale event	CIO / Process owner
Change-attributable incidents	Not available	0 — any event triggers review	Control owner / CIO
Evidence-gate closure	0%	VG/CR packages closed per decision	Finance Benefits

BASELINE CAUTION

“Not available” and “\$0 recognized” mean the evidence has not met the rule—not that the risk or the opportunity is zero.

Eight principles resolve enterprise control versus local responsiveness

GOVERNING PRINCIPLES

- One enterprise standards spine for policy, data contracts, and control definitions.
- Certified local context: restrictions, operating minimums, and emergency rights stay local and evidenced.
- Control by design—authorization, SoD, access, audit, and reconciliation specified before build.
- Staged, reversible change with a rehearsed return to the approved prior process.
- Evidence before value: no benefit enters a ledger without its own gate and Finance approval.
- Service continuity is non-negotiable, including the approved peak change freeze.
- Work around the three existing ERPs; sequence platform choices after data and control ownership.
- Non-compensating gates: a failed critical gate blocks the affected decision value.

GATE RULE

A failed critical gate cannot be averaged away by a strong weighted score.

Federated coordination offers the best balance with a local fallback

GATE-THEN-SCORE COMPARISON		
OPTION	SCORE	ASSESSMENT
Federated coordination	87	Leads all five plausible weight sensitivities; preserves local rights
Local stabilization	72	The documented fallback; bounded improvement without the enterprise spine
Globally coordinated	60	Held: integration readiness and affordability are unevidenced

Switch to local stabilization if global data/control ownership, minimum integration readiness, or affordability fails—or if any critical control, service, local-right, or resilience condition fails.

BOUNDARY

Scores compare design direction only. Every execution-evidence gate remains open.

Source: W3 strategic options; W3 sensitivity outputs.

Centralize standards and evidence—not every operational decision

ACCOUNTABILITY SPINE

OWNER	OWNS	DOES NOT OWN
Global Treasury	Policy, data contracts, daily-position and mobility standards	Local execution or emergency payment authority
CIO	Staged integration, access, auditability, cyber, resilience	Business definitions or benefit recognition
Finance	Cost and benefit governance; recognition rules	Operational payment execution
Regions and BUs	Certified local context, critical payments, emergency rights	Enterprise standards or data contracts

DESIGN INTENT

One control and data spine; local responsiveness preserved where service and law require it.

Seven initiatives start with data, governance, and value control

PRIORITY ORDER

#	INITIATIVE	SCORE	WHY IT LEADS
1	Cash data and visibility	94	Every later claim depends on certified source data
2	Benefits, cost, and KPI assurance	92	Prevents unvalidated value entering a ledger
3	Governance, service, and adoption	86	Decision rights before delivery
4	Payment controls and exceptions	85	Diagnose causes before standardizing
5	Liquidity certification	83	Mobility evidence before any cash claim
6	Integration, access, resilience	80	Staged; sequenced after ownership
7	Account rationalization	63	Lowest value; candidate closures only

SEQUENCING RULE

No platform procurement is proposed. Data, governance, and value control come first.

The case stays credible by keeping unlike value types separate

FOUR NON-ADDITIVE LEDGERS

VALUE TYPE	DIAGNOSTIC QUANTITY	RECOGNIZED TODAY
Cash release	\$21m / \$35m / \$46.2m screens	\$0
Annual P&L	\$3,900 / \$7,800 fee sensitivity	\$0
Productive capacity	50 / 150 hours per month	\$0
Risk reduction	Exposure not quantified	NOT QUANTIFIED

PROVISIONAL PLANNING COST – ANALYST ASSUMPTION

One-time \$755k / \$1.155m / \$1.715m and recurring \$175k / \$281k / \$442k per year. The base case fits the FY2026 \$1.0–\$1.5m ceiling; the high case breaches it and returns for staged approval. No vendor quote, statement of work, or rate card exists.

BOUNDARY

Never add these ledgers. ROI, NPV, and payback stay unavailable while recognized benefit is \$0.

Use 90 days to earn a bounded test before scaling

Evidence mobilization first; every wave sits behind its own gate

DAYS 1–30

Own the facts

Record direction and rights; reconcile the 55-account and 7,600-record populations; confirm exact North America freeze dates.

DAYS 31–60

Prove conditions

Mobility and local-right reviews; service and control design; bottom-up CR01–CR10 cost ranges.

DAYS 61–90

Make ready, then return

Link source evidence; lock target rules; rehearse rollback safely; return for a separate G3 decision.

MONTHS 4–18

Only if evidence holds

Wave 1 after separate approval and outside the freeze; Wave 2 expands only while evidence holds.

FREEZE CONSTRAINT

No North America payment-routing or approval-workflow production change during the eight-week peak freeze; NA BU CFO sign-off required.

Governance converts the roadmap into stop, switch, and scale decisions

TRIGGER AND RESPONSE

TRIGGER	RESPONSE	DECISION OWNER
Data or definition remains unowned	Narrow scope; hold the affected gate	CFO / Group Treasurer
Cash mobility uncertified	No cash claim; certification continues	Group Treasurer / Finance
Service, control, or rollback failure	Stop, revert, and investigate	CIO / BU Finance
Affordability evidence absent	No funding decision; return for staged approval	CFO / Finance
Value formula drifts	Reject the calculation; rebuild by value type	Finance

NON-COMPENSATING RULE

Critical risk cannot be averaged away by strong performance elsewhere.

Approve the direction and owners; return at Day 90

FIVE COMMITMENTS REQUESTED

- 1 Confirm the direction, the local-stabilization fallback, and the no-execution boundary at Day 0.
- 2 Accept the named functional owners and data contracts by Day 30.
- 3 Close the exact North America freeze dates and the sign-off path by Day 30.
- 4 Produce bottom-up CR01–CR10 cost evidence by Day 60.
- 5 Take a separate stop / extend / bounded-pilot decision at G3 on Day 90.

WHAT IS NOT REQUESTED

No production change, cash movement, account closure, labor action, benefit recognition, procurement, or scale.

Definitions, data quality, and methods bound every metric

METHOD LIMITS CARRIED WITH EACH CLAIM

METRIC FAMILY	METHOD	STATED LIMIT
Visibility	Reporting-date equality proxy	Not start-of-day or elapsed-24-hour performance
Liquidity	Trailing-window screen after buffers	Not surplus, transferable cash, or authority
Payments	Supplied flags, deduplicated cohorts	Association only; overlap counted once
Accounts	Dormant + legacy + zero-payment screen	Candidates only; no approved closure
Capacity	Management-estimated activity hours	Not observed time or removable labour

CERTIFICATION STATUS

52/52 structural checks and 13/13 reconciliation controls pass; source certification remains open.

Source: W1 data-quality report; W2 metric contract; final evidence register.

Sensitivities and rejected alternatives support the choice

CONSIDERED AND REJECTED	
ALTERNATIVE	WHY IT WAS REJECTED
Immediate global coordination	Integration readiness and affordability are unevidenced
Indefinite local-only remediation	Leaves the enterprise data and control gap unresolved
Bulk account closure	Only four candidates; local purpose and continuity unvalidated
Automatic payment automation	Causes unproven; required control work not yet classified
Early labour or value claims	No observed time, approved formula, or Finance recognition

ROBUSTNESS

Federated leads all five plausible weight sensitivities; the switch conditions remain explicit.

Source: W3 option sensitivity outputs; W3 business case downside; W4 decision log.

Source and assumption controls keep every claim auditable

EVIDENCE-LABEL CONVENTION

LABEL	MEANING
PROGRAM-STANDARD	Programme rule or template requirement
ACG-DATA	Supplied client material or project dataset
ANALYST-CALC	Reproducible calculation from supplied data
ANALYST-ASSUMPTION	Unverified input requiring validation
ANALYST-JUDGMENT	Interpretation, score, threshold, or proposed action
JPM-PUBLIC	Public context; never proof of ACG performance

REBUILD PATH

Every published figure regenerates from documented scripts with fail-closed tests.

Source: final source register; final assumptions register; final evidence register.

The remaining eight KPIs complete the performance contract

Tracked by the owning function; escalated to the committee only on breach

FUNCTIONAL KPIS

KPI	BASELINE TODAY	DECISION THRESHOLD	OWNER
Two-plus-day delayed account-days	2,534 of 9,955	≥75% reduction in cohort by G5	Treasury Data Owner
Reconciled cash positions	Not available	100% before a funding decision	Group Treasurer
Manual-touch rate	31.51%	Target after root-cause review	Shared Services
Late-release rate	5.00%	No deterioration at G4; ≥20% by G5	Shared Services / BU
Emergency-payment compliance	Not available	100%	BU Finance / Control
Trained and access-certified roles	0%	100% before production access	Change Lead / CIO
Verified fee removal	\$0 recognized	Recognition only after VG06–VG07	Finance / Treasurer
Productively redeployed hours	0 recognized	Recognition only after VG08–VG10	Shared Services / Finance

PERFORMANCE CONTRACT

Every KPI needs a controlled population, definition, formula, source, owner, and change history before it is used.
