

Advance federated design—not execution

DIRECTION

87 federated

Against 72 local and 60 global. A design direction, not confidence, value, or readiness.

RECOGNIZED VALUE

\$0 today

RISK NOT QUANTIFIED

Cash, P&L, and capacity each recognize nothing. Cost, ROI, NPV, and payback are unavailable.

EVIDENCE GATES

7 open

Every execution-evidence gate remains open. None is closed by this pack.

DECISIONS REQUESTED TODAY

- 1 Endorse federated coordination as the provisional direction, with local stabilization as the fallback.
- 2 Confirm accountable owners for data, mobility, payments, controls, service, cost, and benefits.
- 3 Approve a 90-day evidence timebox and reserve every launch, spend, value, and scale decision.

GOVERNING MESSAGE ACG has enough evidence to choose a design direction—not enough to authorize execution or book value.

The evidence points to concentrated friction, not a proven benefit

Week 2 readouts define where to investigate—and where inference must stop

DIAGNOSTIC READOUT		
EVIDENCE	SUPPORTS	DOES NOT SUPPORT
23 / 55 accounts delayed; portal and spreadsheet only	Targeting source and timestamp controls	Start-of-day performance, or a cause
\$38.13m 14-day liquidity screen at 30 June	Testing mobility and buffer evidence	Cash, surplus, or transfer authority
7,600-record extract; 2,839-record priority union	Bounding a payment diagnostic	A certified ACG-wide population
356 exceptions; 14,939 repair minutes	Prioritizing root-cause evidence	Cause, removal, P&L, or headcount

Reporting-date delay is a proxy, and association is not causation. \$38.13m is a screen, not cash.

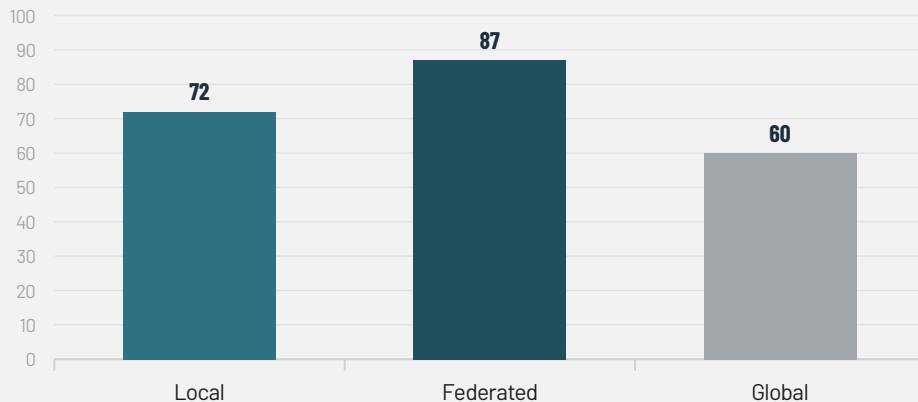

IMPLICATION

The next decision is how to close evidence gaps safely—not how much value to book.

Federated leads at 87—subject to seven open gates

Directional option score; not confidence, value, or execution readiness

WEIGHTED SCORE / 100

READOUT

5**Declared sensitivity cases**

Federated leads every case

7**Non-compensating gates**

All remain open

0**Execution-ready options**

Design discussion only

ASK

Advance federated detailed design, retain local stabilization as the fallback, and hold global coordination pending evidence.

One global spine can preserve local rights while tightening the decision chain

Common standards and evidence; governed regional and local validation and execution

DECISION CHAIN		
LAYER	ENTERPRISE RESPONSIBILITY	REGIONAL / LOCAL RIGHT AND PROOF
1 · Standards	Treasury sets policy, definitions, and KPI	Local calendar, restriction, and purpose
2 · Position / intake	Govern position and payment intake	Challenge facts; protect critical needs
3 · Decision	Decide within delegated authority	Block unsafe action; use emergency right
4 · Execution	Shared or approved enterprise route	Execute locally; retain status and audit
5 · Learn	Govern KPI, controls, and value	Own corrective action; reconcile outcome

BOUNDARY

This is a decision-rights model—not a platform, bank, vendor, or final-architecture selection.

Visibility readiness starts with 55-account control, then a 10-account read-only test

The cohort tests data reliability; it does not test cash mobility or value

SCOPE AND SAFEGUARDS

ELEMENT

LOCKED DESIGN

Census 55 accounts across 9,955 account-days

Cohort 10 accounts: 5 spreadsheet, 5 portal

Control 10 / 10 require base control review

Protected AC0040 only: APAC, payroll, restricted; read-only shadow, substitution documented

LATER OPERATING-TEST GATES

MEASURE

CONDITION

Comparable operation Minimum four consecutive weeks

Data $\geq 95\%$ on-time; 100% reconciled or explained

Service / control Zero defined critical failures; zero confirmed breaches

Recovery Rollback rehearsed at or below four hours

BOUNDARY

No liquidity, borrowing, cash-release, fee, or capacity KPI is an acceptance measure for this design.

Payment v3 uses 120 paired reviews to diagnose causes

Four mutually exclusive strata; transparent issue modes and matching deviations

SAMPLE RECIPE PER STRATUM

ROLE	COUNT	DEFINITION
Exception / status issue	8	Exception, repaired, or rejected
Late-only issue	7	Late flag without exception or status issue
Non-issue control	15	Flag-negative; supplied status Completed

FRAME READOUT

READOUT	RESULT
Four strata	30 each; 120 records total
Matching	50 exact four-field pairs
Residual imbalance	10 visible nearest-match deviations
Inference	Purposive diagnosis; no prevalence or benefit

ASK

Choose an intervention only after evidence-based root-cause coding and a comparable baseline.

Source: W3 payment pilot charter; W3 payment sample frame; W3 pilot model controls.

Four value ledgers stay separate; recognized value remains zero

Diagnostic quantities are not benefits and cannot be added

VALUE LEDGERS

LEDGER	DIAGNOSTIC QUANTITY	RECOGNIZED TODAY	EVIDENCE GATE
Cash release	\$21m / \$35m / \$46.2m screens	\$0	VG01-VG05
Annual P&L	\$3,900 / \$7,800 / \$7,800	\$0	VG06-VG07
Capacity	50 / 150 / 150 hours per month	\$0	VG08-VG10
Risk	Exposure and value NOT QUANTIFIED	\$0 ledger entry only	VG11-VG12

BOUNDARY

Actual implementation cost, ROI, NPV, payback, and a funding recommendation are unavailable.

The downside preserves the direction, while ownership and affordability can force a switch

Falsification before commitment

DIRECTION SURVIVES

\$21m screen, two closure candidates, \$3,900 independent sensitivity, and 50 hours per month.

Federated still supports common ownership, controls, local rights, and reversible learning.

The same evidence packages remain necessary at lower diagnostic quantities.

DIRECTION SWITCHES

Use local stabilization if ownership, minimum integration readiness, or affordability fails.

Reconsider global only after legal, architecture, resilience, cost, mobility, and rollback close.

Remove or redesign any option that fails a critical gate.

VERDICT

The recommendation survives only as a conditional design direction; validated value remains \$0 and cost remains unavailable.

Five owner-led evidence packages now gate launch and funding

Model controls can pass while client evidence remains open

OPEN PACKAGES

OPEN PACKAGE	ACCOUNTABLE OWNER(S)	REQUIRED EVIDENCE	STATUS
Data / metric	Treasurer; CIO enables	Population, source, cutoff, definition, lineage, owner	OPEN
Local rights / mobility	Treasury; Regional; Legal and Tax	Restriction, purpose, buffers, transferability, service	OPEN
Controls / cyber	Control owner; CIO and Cyber	Authorization, SoD, access, audit, duplicate, sanctions	OPEN
Service / resilience	BU and Regional; Shared Services; CIO	Critical flows, blackout, monitoring, ≤ 4h rollback	OPEN
Cost / recognition	Finance; Procurement; functions	CR01–CR10; VG01–VG12; timing, attribution, realization	BLOCKED

BOUNDARY

A model-control pass validates fail-closed model behavior—not evidence-gate closure.

Source: W3 control inventory; W3 assumptions register; W3 cost and model control outputs.

Use 90 days to make the next decision evidence-ready, then return for go/no-go

Evidence mobilization only; time does not override an open gate

DECISION DAY

Align and assign

Confirm direction, accountable owners, local fallback, and the no-execution boundary.

DAYS 1–30

Reconcile and define

Control the 55-account and 7,600-record populations; lock definitions, sources, calendars, and gaps.

DAYS 31–60

Certify and cost

Complete local, control, and architecture review, CR01–CR10 ranges, and safe-environment rollback rehearsal.

DAYS 61–90

Lock and decide

Lock baselines and target rules; return with stop, extend-evidence, or a later bounded-pilot recommendation.

DECISIONS NOW

Endorse the direction · assign owners · approve the evidence timebox · reserve all launch, spend, value, and scale decisions.
