

Advance federated design—not execution

Advance the federated direction · retain local stabilization · hold global coordination

\$1.0–\$1.5m ceiling only—not cost, budget, or spend authority.

The evidence points to concentrated friction, not a proven benefit

Week 2 readouts define where to investigate—and where inference must stop

Diagnostic readout

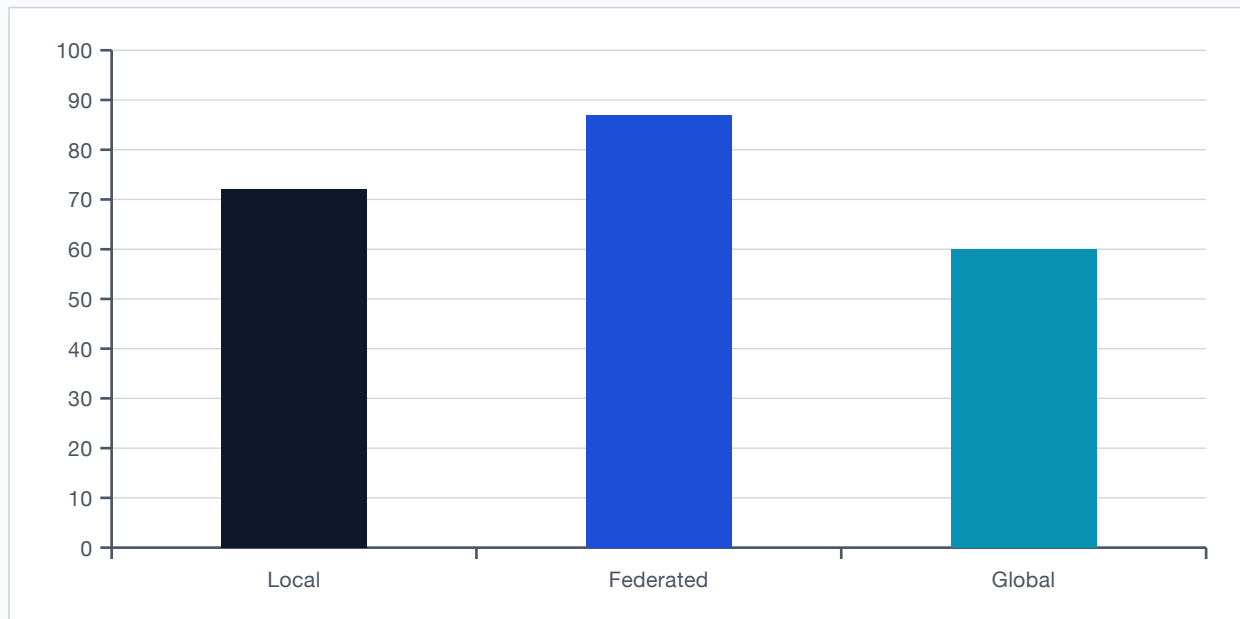

Evidence	Supports	Does not support
23 / 55 delayed; portal + sheet	Source / timestamp controls	Start-of-day performance or cause
\$38.13m 14-day screen, 30 Jun	Mobility / buffer evidence	Cash, surplus, transfer authority
7,600 extract; union 2,839	A bounded payment diagnostic	Certified ACG-wide population
356 exceptions; 14,939 min	Root-cause prioritization	Cause, removal, P&L, headcount

Delay is a proxy, not causation; \$38.13m is a screen, not cash.

The next decision is how to close evidence gaps safely—not how much value to book.

Federated leads at 87 —subject to seven open gates

Directional option score; not confidence, value, or execution readiness

READOUT

Cases

5

Cases

7

Gates

0

Ready

One global spine can preserve local rights while tightening the decision chain

Common standards and evidence; governed regional/local validation and execution

Decision-chain layer	Enterprise responsibility	Regional / local right and proof
1 · Standards	Policy, definitions, KPI	Calendar, restriction, purpose
2 · Intake	Govern position and intake	Challenge facts; protect needs
3 · Decision	Decide within authority	Block unsafe act; emergency right
4 · Execution	Shared or approved route	Execute locally; retain audit
5 · Learn	Govern KPI, controls, value	Own fixes; reconcile outcome

READOUT

1 · Standards: Policy, definitions, KPI
2 · Intake: Govern position and intake

Visibility readiness starts with 55-account control, then a 10-account read-only test

The cohort tests data reliability; it does not test or value mobility

Scope and safeguards

Element	Locked design	Boundary
Census	55 accounts / 9,955 account-days	Full source, cutoff, owner, and reconciliation contract first
Cohort	10 delayed accounts; 5 spreadsheet + 5 portal	3 regions, 3 ERPs, 4 banks; purposive only
Protected	AC0040: APAC, Payroll, restricted	Read-only shadow; enhanced review or substitution

Later operating-test gates

Measure	Condition
Comparable operation	Minimum 4 consecutive weeks
Data	≥95% on-time; 100% reconciled or formally explained
Service / control	0 defined critical failures; 0 confirmed breaches
Recovery	Rollback rehearsed at or below 4 hours

No liquidity, borrowing, cash-release, fee, or capacity KPI is an acceptance measure.

Payment v3 uses 120 paired reviews to diagnose causes

Four mutually exclusive strata; transparent issue modes and matching deviations

Sample recipe per stratum

Role	Count	Definition
Exception / status issue	8	Exception, Repaired, or Rejected
Late-only issue	7	Late flag without exception/status issue
Non-issue control	15	Flag-negative supplied status Completed

Frame readout

Readout	Result
Four strata	30 each / 120 total
Matching	50 exact four-field pairs
Residual imbalance	10 visible nearest-match deviations
Inference	Purposive diagnosis; no prevalence or benefit

Choose an intervention only after evidence-based root-cause coding and a comparable baseline.

Four value ledgers stay separate; recognized value remains zero

Diagnostic quantities are not benefits and cannot be added

Ledger	Diagnostic quantity	Recognized today	Evidence gate
Cash release	\$21m / \$35m / \$46.2m screens	\$0	VG01–VG05
Annual P&L	\$3,900 / \$7,800 / \$7,800	\$0	VG06–VG07
Capacity	50 / 150 / 150 hours/month	\$0	VG08–VG10
Risk	NOT QUANTIFIED	\$0 ledger entry	VG11–VG12

READOUT

Cash release: \$21m / \$35m / \$46.2m screens
Annual P&L: \$3,900 / \$7,800 / \$7,800

The downside preserves the direction, while ownership and affordability can force a switch

Falsification before commitment

Direction switches

- Switch to local: ownership or affordability
- Reconsider global only after gates close
- Drop options failing a gate

Direction survives

- \$21m screen; 2 candidates; \$3,900; 50 hrs/mo
- Still fits ownership, controls, local rights
- Evidence packages still required

A conditional design direction only; validated value is \$0 and cost is unavailable.

Five owner-led evidence packages now gate launch and funding

Model controls can pass while client evidence remains open

Open package	Accountable owner(s)	Required evidence	Status
Data / metric	Treasurer; CIO	Population, source, cutoff, lineage	OPEN
Local rights	Treasury; Regional; Legal	Restriction, purpose, transferability	OPEN
Controls / cyber	Control owner; Cyber	Authorization, SoD, access, audit	OPEN
Service / resilience	BU; Shared Services; CIO	Critical flows, blackout, ≤4h rollback	OPEN
Cost / recognition	Finance; Procurement	CR01–CR10; VG01–VG12; attribution	BLOCKED

READOUT

Data / metric:
Treasurer; CIO
Local rights: Treasury;
Regional; Legal

Use 90 days to make the next decision evidence-ready, then return for go/no-go

Evidence mobilization only; time does not override an open gate

DECISION DAY

Align and assign

Confirm direction, owners, fallback, and the no-execution boundary.

DAYS 1–30

Reconcile and define

Control the 55-account and 7,600-record populations; lock definitions and sources.

DAYS 31–60

Certify and cost

Complete local, control, and cost review; rehearse rollback safely.

DAYS 61–90

Lock and decide

Lock baselines; return with stop, extend, or a later bounded pilot.

Decisions now: endorse direction · assign owners · approve the evidence timebox. All launch, spend, value, and scale decisions are reserved.
