

ACG should advance to option design, but through two targeted pilot designs and three evidence gates

VISIBILITY

23/55 delayed

All delayed accounts use portal or spreadsheet reporting.

LIQUIDITY

\$38.13m

14-DAY SCREENING RESULT

Validated movable cash remains
\$0 established.

PAYMENTS

2,839 record priority union

356 exceptions and 14,939 repair minutes.

DECISIONS REQUESTED TODAY

- 1 Authorize the Week 3 three-option comparison.
- 2 Approve design—not execution—of two bounded validation pilots.
- 3 Confirm evidence owners and the 18 / 19 / 21 August deadlines.

GOVERNING MESSAGE ACG has enough evidence to design and test the transformation—not enough to fund the full value claim.

Reporting delay is source-concentrated and testable; the analysis does not yet validate a movable-cash amount

Balance-source distribution – 55 accounts

API 12	HOST-TO-HOST 20	PORTAL 9	SPREADSHEET 14
-----------	--------------------	-------------	-------------------

32 same-day date proxy

23 delayed date proxy

Date proxy – not evidence of start-of-day or within-24-hour visibility.

30 June liquidity waterfall

Gross positive estimated availability		\$57.80m
Preliminary restriction screen		-\$8.05m
Negative account positions		-\$2.14m
Apparent net before screening window		\$47.61m
Effective 14-day reduction after account floors		-\$9.48m
14-day screening result – not movable cash		\$38.13m

Threshold check: \$35m passes 138/168 complete 14-day windows (82%); minimum \$31.28m.

ASK

Validate timestamps for all 55 accounts and certify mobility, buffers, funding events, facility use, and economics before any liquidity value is funded.

Source: W2 visibility diagnostic; W2 liquidity scenarios and thresholds.

Within 7,600 supplied records, a 2,839-record priority union carries three-quarters of exceptions and repair minutes

FOUR MUTUALLY EXCLUSIVE STRATA

COHORT	RECORDS	EXCEPTIONS	RATE	REPAIR MIN	GROSS PAYMENT-INTENT
Manual touch only	2,053	246	11.98%	10,018	\$51.98m
Manual touch + cross-border wire	342	58	16.96%	2,702	\$6.85m
Cross-border wire only	444	52	11.71%	2,219	\$7.88m
Neither	4,761	123	2.58%	5,141	\$131.43m

Overlap: 342 records = 14.28% of manual touch / 43.51% of cross-border wires. The original manual-touch and cross-border-wire totals cannot be added.

ASK

Reconcile the source population, then test intake completeness, cutoff discipline, format, and required controls across the four strata before sizing automation value.

A controlled data-to-decision spine—not ERP replacement—constrains Wave 1 sequencing

SUPPORTING FINDINGS

FINDING	CURRENT EVIDENCE	DESIGN CONSEQUENCE
Capacity is material but unvalidated	617.72 estimated manual hours/month; the process repair estimate is 84% above the payment-file estimate (unreconciled source estimates); High-criticality work = 315.48 hours	Reconcile scope, preserve/replace controls, and validate observed/removable time before funding 150 hours/month
Ten closures are unsupported	Four candidates; \$7,800 estimated annual fees	Treat as controlled housekeeping, not a business-case pillar

TARGETED MATURITY READOUT

EMERGING TODAY		18-MONTH OBSERVABLE TARGET
End-to-end ownership unconfirmed	→	Confirmed global/local RACI
Manual source and process handoffs	→	Owned data, standard intake/cutoff
Unvalidated controls and KPIs	→	Tested SoD, resilience, rollback, KPI
Three ERPs + 23 delayed sources	→	Staged integration around existing ERPs

ASK

Confirm the draft RACI and require data, control, service, and rollback gates before platform or pilot scale decisions.

Source: W2 process capacity; repair baseline reconciliation; account diagnostic; maturity heatmap; current-state process map and RACI.

Three validations will determine which Week 3 option survives the downside

EVIDENCE GATES → COMMON DOWNSIDE TESTS → THREE-OPTION COMPARISON

EVIDENCE-TO-DECISION GATES

- 1 Visibility** 18 Aug · Group Treasurer
Unlocks pilot scope, architecture, 50/55 feasibility
- 2 Payment / process** 19 Aug · Shared Services Lead
Unlocks the four-stratum root-cause review and a controlled capacity case
- 3 Mobility / economics** 21 Aug · Group Treasurer
Unlocks validated liquidity range and funded value

EVERY OPTION MUST SURVIVE THE SAME TESTS

DOWNSIDE TEST	STRESS	CURRENT DIAGNOSTIC POSITION
Liquidity	\$21m	Survives every modeled complete window; still not validated mobility
Closures	2 accounts	Four candidates evidenced; ten unsupported
Capacity	50 hours/month	Screening baseline exists; removability unvalidated
Controls / service	Four consecutive weeks + four-hour rollback	Requirements proposed; owner approval pending

WEEK 3 DIRECTION Develop and compare **local stabilization, federated coordination, and globally coordinated** options: one enterprise data/control spine, defined local autonomy, staged around existing ERPs, no peak-season disruption, unvalidated value outside the funded base.
